

Michigan Adult Vaccine Program (MI-AVP)

Eligibility includes uninsured and underinsured adults 19 years of age or older, who meet certain risk factors. Adults with vaccine insurance coverage or Medicaid do not qualify for this program, however, adults with a Medicaid spend-down are considered uninsured and would be eligible until their spend-down is met.

Medicaid will cover vaccine and administration costs for the vaccines included in the MI-AVP Program.

Adults who qualify for MI-AVP will receive free vaccinations and may be required to pay up to a \$23.00 administration fee for each vaccination, based up a sliding fee scale.

Adults needing immunizations should call our office to determine the vaccine costs, administration charges, eligibility for MI-AVP or insurance coverage information.

The following vaccines are available through MI-AVP:

- Tdap vaccine**
- Hepatitis A vaccine**
- Hepatitis B vaccine**
- Zoster/Shringrix (for those 50 years and older)**
